Super blood moon shines over Lamorinda

By *Cathy Dausman*

Big, bright and rusty red, early rising Lamorinda watched a super blue blood moon hanging low in the western sky on the final morning in January. Overslept? The next blue moon (second full moon in a given month) appears March 3. The next total lunar eclipse (blood moon) visible in North America is two years out - Jan. 21, 2019. The next supermoon event is Nov. 25, 2034, and the next super blue blood moon won't happen until Jan. 31, 2037. Don't wait up.
